Drinking Water Sources

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Our water source(s):

Consecutive Connection to GRAHAM COUNTY UTILITIES - PIMA

Consecutive Connection Sources

A public water system that receives some or all of its finished water from one or more wholesale systems by means of a direct connection or through the distribution system of one or more consecutive systems. Systems that purchase water from another system report regulated contaminants detected from the source water supply in a separate table.

PWS # AZ04-05-002, GRAHAM COUNTY UTILITIES - PIMA provides us a consecutive connection source of water.

Drinking Water Contaminants

Microbial Contaminants: Such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife

Inorganic Contaminants: Such as salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming

Pesticides and Herbicides: Such as agriculture, urban storm water runoff, and residential uses that may come from a variety of sources

Organic Chemical Contaminants: Such as synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also may come from gas stations, urban storm water runoff, and septic systems.

Radioactive Contaminants: That can be naturally occurring or be the result of oil and gas production and mining activities.

Vulnerable Population

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. Some people may be more vulnerable to contaminants in drinking water than the general population.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and microbiological contaminants call the EPA *Safe Drinking Water Hotline* at 1-800-426-4791.

Definitions

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water

Level 1 Assessment: A study of the water system to identify potential problems and determine (If possible) why total

Minimum Reporting Limit (MRL): The smallest measured concentration of a substance that can be reliably measured by a given analytical method Millirems per year (MREM): A measure of radiation absorbed by the body

coliform bacteria was present	Not Applicable (NA): Sampling was not completed by regulation or was not required			
Level 2 Assessment: A very detailed study of the water system to identify potential problems and determine (if	Not Detected (ND or <): Not detectable at reporting lin			
possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria was present	Nephelometric Turbidity Units (NTU): A measure of water clarity			
Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment, or other requirements	Million fibers per liter (MFL)			
Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water	Picocuries per liter (pCi/L): Measure of the radioactivity in water			
Maximum Contaminant Level Goal MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health	ppm: Parts per million or Milligrams per liter (mg/L) ppb: Parts per billion or Micrograms per liter (µg/L)			
Maximum Residual Disinfectant Level (MRDL): The level of disinfectant added for water treatment that may not be exceeded at the consumer's tap	ppt: Parts per trillion or Nanograms per liter (ng/L) ppq: Parts per quadrillion or Picograms per liter (pg/L) ppm x 1000 = ppb			
Maximum Residual Disinfectant Level Goal (MRDLG): The level of disinfectant added for treatment at which no known or anticipated adverse effect on health of persons would occur	ppb x 1000 = ppt ppt x 1000 = ppq			

Lead Informational Statement:

Lead, in drinking water, is primarily from materials and components associated with service lines and home plumbing. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Eden Water Company is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Water Quality Data - Regulated Contaminants

Microbiological (RTCR)	TT Violation Y or N	Number of Positive Samples	Positive Sample(s) Month & Year	MCL	MCLG	Likely Source of Contamination	
E. Coli	N	0	Α	0	0	Human and animal fecal waste	
Fecal Indicator (From GWR source) (coliphage, enterococci and/or E. coli)	N	0	А	0	0	Human and animal fecal waste	
Disinfectants	MCL Violation Y or N	Running Annual Average (RAA)	Range of All Samples (Low-High)	MRDL	MRDLG	Sample Month & Year	Likely Source of Contamination
							Water additive used to control microbes
Chlorine/Chloramine (ppm)	N	.38	.01.06	0	4	Monthly 2023	microbes
Disinfection By-Products	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level Detected	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination
Haloacetic Acids (HAA5) (ppb)	N	ND	0	60	N/A	7/2023	Byproduct of drinking water disinfection
The state of the s	-						Byproduct of drinking water
Total Trihalomethanes (TTHM) (ppb)	N N	4.6	<u>0</u> Number of	<u>80</u>	N/A	7/2023	
Lead & Copper	Violation Y or N	90 th Percentile	Samples Exceeds AL	AL	ALG	Month & Year	Likely Source of Contamination
Copper (ppm)	N	0.014	0	1.3	1.3	9/2023	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	N	.0	0	15	0	9/2023	Corrosion of household plumbing systems; erosion of natural deposits
Inorganic Chemicals (IOC)	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level Detected	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination
Arsenic ¹ (ppb)	N	3.35	1.8-8.7	10	10	monthly 2023	Erosion of natural deposits, runoff from orchards, runoff from glass and electronics production wastes
Barium (ppm)	N	.0069	.00690070	2	2	10/2023	Discharge of drilling wastes; discharge from metal refinerie Erosion of natural deposits

Chromium (ppb)	N/A_	3.15	3.0-3.3	100	100	10/2023	Discharge from steel and pulp mills; Erosion of natural deposits
	N	1.4	1.4	4	4	10/2023	Erosion of natural deposits; water additive which promotes strong teeth; discharge from
Fluoride (ppm)	-						fertilizer and aluminum factories
Sodium (ppm)	N/A	140	140	3000	3000	10/2023	Erosion of natural deposits
Combined Radium (From Graham County Utilities- Pima CCR)	N	0.579	0.472-0.579			10/23	

Arsenic is a mineral known to cause cancer in humans at high concentration and is linked to other health effects, such as skin damage and circulatory problems. If arsenic is less than or equal to the MCL, your drinking water meets EPA's standards. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water, and continues to research the health effects of low levels of arsenic.

Violation Summary (for MCL, MRDL, AL, TT, or Monitoring & Reporting Requirement)

Violation Type	Explanation, Health Effects	Time Period	Corrective Actions
Missed Monitoring	Did not submit 4th quarter 2023 residual chlorine data	Oct-Dec 2023	1st Quarter Data submitted 2024 to
			ADEQ
Missed Monitoring	2022 CCR mailing certification not	2023	
	submitted		
Late Reporting	Residual Chlorine data was taken but not submitted on time	1st-3rd quarter 2023	Data Submitted past due date
1 0	Total Coliform data was taken but not submitted on time	May and September	Data Submitted past due date
		2023	

 [&]quot;Please share this information with other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail."

ADEQ Consumer Confiden	æ Report - Ter	nplate Revised Ju	ly 2017
------------------------	----------------	-------------------	---------

² Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause "blue baby syndrome." Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, and detected nitrate levels are above 5 ppm, you should ask advice from your health care provider.
